

GlemO - Execution Roadmap

Canonical 24-month plan for the US\$2M pre-seed round: build the neutral liquidity and distribution rail for real-world assets, with a public marketplace front for selected opportunity discovery and active buyer activation.

Dates are milestone-driven and market-conditional.

Calendar Summary

Window	Period	Focus	Investor Evidence
M1	Sep 2026	Round close, budget lock, counsel kickoff, platform mandate and token objective covenant.	Closing pack, updated cap/token schedule, Head of Platform mandate and draft covenant.
M2-M3	Oct-Nov 2026	Legal memo, marketplace-front scope, provider outreach and current evidence folder.	Counsel workplan, provider shortlist, disclosure rules and CRM/GMV export.
M4-M6	Dec 2026-Feb 2027	Pre-launch build, wallet labels, opportunity sourcing pipeline and marketplace/app readiness.	Audit status, wallet report, launch checklist, sourced opportunities and market pipeline.
M7	Mar 2027	Token incentive readiness for dApps, AI agents and verified contribution, with approved liquidity/MM policy.	Contract/audit artifacts, wallet report, incentive rules, MM/liquidity policy and display/access rules.
M8-M12	Apr-Aug 2027	Post-readiness reporting, platform usage proof, buyer activation and provider LOI path.	Monthly cash report, usage/revenue dashboard, qualified buyer response and provider discussions.
M13-M24	Sep 2027-Aug 2028	Seed readiness, recurring revenue, repeatable sourcing, developer/agent contribution evidence and multi-provider RWA optionality.	Seed data room, revenue cohorts, opportunity pipeline, buyer-response data, accepted builds and legal/provider gates.

Confidential - For authorized investor diligence only. Public marketplace discovery does not imply unrestricted securities distribution, guaranteed liquidity or yield.

Seed Financing Language

Base case: US\$20M+ seed valuation milestone with a US\$4-6M raise after gates are met. Upside case: up to US\$8M only if legal, platform, token, provider, marketplace-front, buyer activation and cash-discipline gates materially exceed plan.

Critical Gates

Gate	Must Be True Before Seed	Why It Matters
Cash discipline	Corrected base plan preserves reserve and conditional spend controls.	Prevents a forced seed under weak negotiating conditions.
Platform independence	Senior platform owner accountable for institution-independent roadmap.	Reduces single-counterparty execution risk.
Marketplace front	Selected opportunities can be surfaced with clear disclosures and access controls.	Proves discovery without turning GlemO into an issuer or unrestricted distributor.
Buyer activation	Qualified buyer response is measured across banks, asset managers, communities and capital channels.	Separates active distribution from passive marketplace traffic assumptions.
Token objective lock	The token supports dApps, AI agents, developer tooling and verified contribution. Material changes require unanimous written approval in definitive documents.	Keeps token utility subordinate to the rail and protects partners and VCs from unilateral repurposing.
Token launch	Wallet controls, vesting, audit, approved incentive rules, liquidity/MM policy and reporting complete.	Reduces hidden sell pressure, governance risk and market-conduct risk.
Unit economics	GMV, institution fees, transaction fees, SaaS revenue, sourcing, token incentives and RWA metrics reported separately.	Prevents revenue-scope confusion.

Confidential - For authorized investor diligence only. Liquidity deployment is milestone-gated and should not be read as a guaranteed fixed TGE pool.
